

2010 Manufacturer's SPOTLIGHT

SIMCO Keeps the Customer in Mind

SIMCO DRILLING EQUIPMENT INC. began designing and building all-hydraulic, tophead-drive drill rigs in 1971 at its manufacturing facility located in Osceola, Iowa. SIMCO manufactures a complete line of drilling rigs for geotechnical, geothermal, water well, environmental and many other specialized applications, ranging from rigs that mount in the back of a pick-up box to rigs that are mounted onto larger tandem-axle trucks.

Regardless of the type of drill, SIMCO gives every customer a personal touch, making them feel like a family member. The SIMCO brand has long been synonymous with building high-quality, simple-to-use drill rigs at a reasonable price. Many drill rig manufacturers try to sell drill rigs by showing customers a specifications list for their drill that has better specifications than the competition. At SIMCO, the engineers and field representatives look at all aspects of what it takes to build, sell and support a top-of-the-line, dependable drill rig that does

what the customer bought it for.

Everyone at SIMCO takes great pride in the quality of their work, knowing that taking care of customers doesn't stop after they buy the drills. SIMCO employees realize that everyone has different needs, and they offer a list of services to cater to almost any customer, whether it be showing the new driller how to operate his drill or helping the veteran driller with outstanding customer service.

SIMCO has listened to its customers, and has optimized the manufacturing process by offering a base drill package for each model, and then providing a list of add-on rig options for just about any application. Building rigs this way is what allows SIMCO to offer the best drill rig in the market with short build times. The customers then get the options they want at less cost. SIMCO also offers one of the industry's best warranties, thus helping put the customer's mind at ease knowing that SIMCO fully supports its products, and that craftsmanship is of the utmost importance.

SIMCO 2800

Don't let its size fool you. This compact package has the power and performance of much bigger rigs. The engineered combination of field proven hydraulics, a high output mud pump/SIMCO PDQ drill rod system and an easy to use, low maintenance operation allow this rig to make money on jobs where most other rigs couldn't even dream of breaking even. Whether it is installing geothermal wells, drilling water wells or doing geotechnical drilling and soil sampling, the 2800 allows you to get in, get done, and get out- all at a fraction of the cost of using much bigger equipment.

SIMCO 7000

For bigger jobs, look to the SIMCO 7000 as the affordable choice. Engineered from the ground up, this rig incorporates many of the most popular and field proven features and options from previous SIMCO rigs. As a successor to the benchmark 5000 model, this rig raises the bar again in terms of reliability, serviceability and performance. A smooth operating and more powerful feed system combined with a state of the art, yet simple to use, rod handling system optimizes the driller's efforts and turns most any job into a profitable one.
